PREFACE

This book is one volume in a set of seven books presenting statistics on hospital stay during 1987 in the United States. The complete set is the latest in a series of publications on length of stay in hospitals that participate in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities. Data from several organizations contributing to CPHA from other sources are included in the 1987 series.

These statistics, also available on magnetic tape, provide a valuable perspective for utilization and quality assurance professionals, physicians, consultants, hospital administrators, third party payors and researchers interested in cost containment and quality care.

CPHA wishes to extend appreciation to the hospitals and state organizations that supported this publication by making their data available.

The Project Staff is indebted to many individuals who made this publication possible. Special thanks to Research Services staff: Carol Prevost, Research Associate, for her Length of Stay expertise, technical advice and patience; Roger Wroblewski, Statistician, for data analysis; Dorothy Kempter and Nancy Cauthen for reviewing the AIDS text; Rhonda Gregory and Kathy Lundquist for clerical and technical support.

Appreciation is extended to other individuals at CPHA: Robert Seeman, Senior Nosologist, for his explanation of coding issues and valuable assistance in producing the AIDS Supplement; John Hallfrisch, MD, Consultant, for his interpretation of clinical data; Robert Travis, Librarian, for meticulously checking the text through its many stages; and the staff of Operations, Client Services, and Word Processing.

INTRODUCTION

The Commission on Professional and Hospital Activities (CPHA) is an organization dedicated to the improvement of hospital and medical care through research, education, publishing, and systems development. Established in 1955 under grants from the W.K. Kellogg Foundation, CPHA is a nonprofit, private organization, sponsored by the American College of Physicians, the American College of Surgeons, the American Hospital Association, and the Southwestern Michigan Hospital Council.

CPHA Publications, a unit of the Research Department, is responsible for the development of data reference tools setting performance guidelines and comparative standards for the health care industry. CPHA Publications disseminates important research findings to support and enhance the day to day activity of health care professionals in a variety of settings.

DESCRIPTION OF THE DATABASE

Source of the Data

Data in the Length of Stay books were compiled from individual patient discharge records submitted to CPHA by hospitals participating in the Professional Activity Study (PAS). In addition, some books contain discharge data from hospitals participating in information systems other than PAS.

The following steps describe the PAS method of storing and retrieving medical data:

1. In each participating hospital, personnel transfer data from the medical record of each discharged patient into the PAS System via PAS+ microcomputer, magnetic tape, or PAS Case Abstract.
2. The disk, tape, or abstract, is mailed to the center of PAS operations in Ann Arbor, Michigan, where it is entered into the computer system.
3. Data undergo a comprehensive editing process and errors are corrected by CPHA and contributing hospitals.
4. The computer system continually adds data to a permanent file. Participating hospitals are provided access to these data through interactive systems, in-house computers, and reports. The stored data are also available to researchers on a contractual basis.
5. Data are standardized to create an aggregated patient record base.

Annually, CPHA Publications uses these data to create the Length of Stay (LOS) series and other reference tools.

Data Quality

Data quality is one of the primary concerns of CPHA. Although the hospital has basic responsibility for the quality of PAS data, CPHA shares that responsibility in its function as an extension of the hospital's medical information network.

CPHA exerts considerable effort to prevent and correct errors in data submitted. Hospital medical records personnel are trained by CPHA in coding and abstracting methods. CPHA monitors submitted data, and meticulously checks and edits the data for errors. Over 600 computer checks are performed during the processing of each record to ensure the reasonableness of the data. Examples of discrepancies detected by the audit are: hospital day of operative episode exceeding total stay, cesarean section with a normal delivery diagnosis, sex-specific diagnosis or operation with the wrong sex recorded, incalculable age or stay, unrecorded or invalid diagnosis. When illogical, invalid, or missing data are detected, about 40 percent of the errors are corrected by computer. The remainder are referred back to hospital staff through computer-generated error messages.

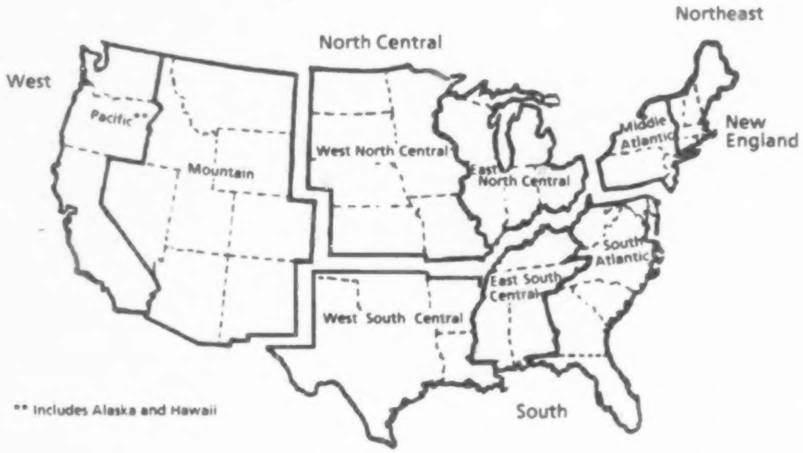
In addition to initial data editing, the computer system that produces the length of stay tables does numerous edits to eliminate uncorrected or unusual data. The following events cause a record to be excluded as not representing a typical short-term patient:

1. death
2. stillborn
3. admission from other short-term hospital
4. discharge to other short-term hospital
5. discharge against medical advice

Geographic Coverage

Data chosen for inclusion in the Length of Stay series are from general, nonfederal, short-term hospitals in the United States. Short-term hospitals are defined as those in which the median stay is shorter than 30 days. General hospitals provide patient services for a variety of medical conditions. Data from long-term specialty institutions, e.g., long-term psychiatric or rehabilitation facilities, are excluded.

The regional volumes of the Length of Stay series are defined by four census regions as described in the map below.



Most data used in the Length of Stay books are from hospitals participating in PAS through CPHA. In addition, the following organizations have sent data to CPHA: Colorado Hospital Association, Hospital Association of New York State, Maine Hospital Association, The National Association of Children's Hospitals and Related Institutions, Inc. (NACHRI), New Hampshire Hospital Association, Oregon Hospital Association, Rhode Island Hospital Association, Southern Kaiser Foundation Hospitals, Vermont Hospital Association and the Wyoming Hospital Association. Several individual hospitals throughout the United States have also sent data to CPHA for special studies. These data enhance CPHA as a national health information center.

Hospitals participating in PAS from United States Territories and Puerto Rico are excluded from the series. Data from psychiatric hospitals are excluded because these facilities are not general hospitals. Data from psychiatric units within general hospitals are included. Pediatric hospitals are also included.

ORGANIZATION OF LENGTH OF STAY TABLES

The length of stay tables are organized according to CPHA's diagnosis and procedure classification system. The Diagnosis classification system is called *ICD-9-CM List A: Hospital Diagnosis Groups*[1]. Within each diagnosis group, patients are stratified by single or multiple diagnoses, operated or nonoperated status, and age. For diagnosis groups 393-395, which pertain exclusively to newborn, age is replaced by birth weight in grams. The Operation classification system is called *ICD-9-CM List B: Hospital Procedure Groups*. Within each procedure group, patients are stratified by single or multiple diagnoses and age.

Diagnosis and procedure information for all patient data included in this book is coded using *ICD-9-CM*. New *ICD-9-CM* codes, introduced in October 1987, are reflected in the index at the back of the book.

Patient Data Assignment

Patient data are assigned an *ICD-9-CM List A* group on the basis of the principal diagnosis. This is the diagnosis that, after study, explains why the patient was admitted to the hospital. Patient data are assigned *ICD-9-CM List B* groups on the basis of the principal procedure. The principal procedure is an item in the Uniform Hospital Discharge Data Set (UHDDS)[2] and generally is that therapeutic procedure most related to the principal diagnosis.

Definition of Multiple Diagnoses Patients

Patients are classified in the multiple diagnoses category if they had at least one valid secondary diagnosis in addition to the principal one. The following codes are not considered valid secondary diagnoses for purposes of this classification:

1. Manifestation codes (conditions that evolved from underlying diseases [etiology] and are in italics in *ICD-9-CM* Volume 1)[3]
2. Codes V27.0-V27.9 (outcome of delivery)
3. E codes (external causes of injury and poisoning)

Definition of Operated Patients

In the diagnosis tables, operated patients are patients who had at least one UHDDS Class 1 procedure. The Class 1 procedure may or may not relate to the principal diagnosis (Dx). Patients with only Class 2-4 procedures are considered nonoperated.

In the procedure tables, operated patients are those whose principal procedure fell into an *ICD-9-CM List B* group where at least one UHDDS Class 1 procedure was present. These tables contain procedures which are either therapeutic to the principal Dx or the only procedure.

While most List B groups contain only Class 1 procedures, the following groups contain Class 1 procedures, and at least one procedure that is Class 2-4: 548, 557, 575, 576, 581, 587, 609, 615, 619, 626, 630, 636, 646, 654, 666, 679, 682, 686, 690, 696, 706, 758, 760, 764. These miscellaneous groups are included for informational purposes only.

List B tables which contain no significant Class 1 procedures are identified with a disclaimer explaining why these tables cannot be used for purposes of examining length of stay. Several tables which, as of October 1987, contain a single low volume Class 1 procedure continue to be identified with a disclaimer.

EXPLANATION OF STATISTICS

The List A diagnosis group titles and List B procedure group titles heading the tables are followed in parentheses by the *ICD-9-CM* diagnosis or procedure codes included in that List A or List B group.

Data are categorized by total patients (column 2), their average length of stay (column 3), the variance (column 4), and distribution percentiles (column 5 through 11). Patients are stratified by single or multiple diagnoses (Dx), operation status, and age. In addition, two subtotals and a grand total are included.

Total Number of Patients

This number represents the total number of patients in the stratified group. Patients with stays over 99 days (99+) are not included.

Average Length of Stay

The length of stay is calculated from the admission and discharge dates by counting the day of admission as the first day. The average is figured by adding the length of stay for each patient and then dividing by the total number of patients. Patients discharged on the day of admission are counted as staying one day in the calculation of average length of stay. Patients with stays over 99 days (99+) are excluded from this calculation.

Variance

The variance is a measure of the spread of the data around the average. For these tables, the smallest variance is zero, indicating all lengths of stay are equal. The maximum value for the variance is 2500.

When using tables in which there is a large variance, and the patient group size is relatively small, the average stay may appear high. This sometimes occurs when one or two patients with long hospitalizations fall into the group.

Distribution Percentiles

A length of stay percentile for a stratified group of patients is determined by arranging the individual patient stays from low to high. Counting up from the lowest stay to the point where half of the patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total patients gives the 10th percentile, and so on.

The 5th, 10th, 50th, 75th, 90th, 95th, and 99th percentiles of stay are displayed in days. If, for example, the 10th percentile for a group of patients is four, it means that 10 percent of the patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+.

Patients who were hospitalized 99+ days or longer are not included in the total patients, average stay, and variance categories. The percentiles, however, do include these patients.

Subtotal and Grand Total

The subtotal represents the total patients in each of the single or multiple Dx, operated or nonoperated categories. The Grand Total represents the total number of patients in the specified diagnosis or procedure category.

APPLICATION OF LENGTH OF STAY TABLES

The Length of Stay series can be used as a valuable reference source in a variety of healthcare settings. Use of stay data allows healthcare professionals to compare regional and national norms to their own institution or client. The LOS series assists in projecting extended stay reviews, while recommending the most effective use of patient care services. Norms from other editions of the LOS series create the opportunity to establish baselines as far back as 1963 to forecast and plan for future service demands.

The following steps are intended to provide a guide in situations where a healthcare professional wishes to determine a reasonable length of stay:

Step 1: Consult the index at the back of the appropriate Length of Stay book for the particular diagnosis or operation to be reviewed.

Step 2: Find the corresponding table in the Length of Stay book. The group number precedes the title of each table.

Step 3: Depending on the purpose of the review, find the appropriate portion of the table:

Single or Multiple Diagnoses

Not Operated or Operated (for Diagnosis groups only)

Patient's Age on Day of Admission

Step 4: Find the 50th percentile of stay for similar patients at the point where the 50th percentile column (7) of the table intersects the horizontal line containing the pertinent patient variables.

Step 5: Consult the total patient sample (Grand Total) and variance to consider the homogeneity of the data, i.e., to what extent length of stay averages are clustered or spread out within a particular patient group.

These general steps are followed, in more specific application, by healthcare professionals in many diverse settings. LOS tables can be used to identify candidates for utilization review, to furnish check points in patient care, to project extended stay reviews and to improve hospital care standards. Concern for quality care and cost containment make the Length of Stay tables an essential tool in the healthcare industry.

LENGTH OF STAY TRENDS

The Length of Stay series sets the industry standard for normative patient stay data from short-term, nonfederal hospitals. First created with 1963-1964 PAS data, the series currently incorporates PAS as well as data from other sources, e.g., hospital associations. The 1987 Length of Stay series is based on over six million patient records, representing 21.5 percent of the short-term, nonfederal hospitals in the United States.

CPHA's annual publication of a reliable, extensive database allows for analysis of length of stay trends. The following table illustrates hospital stay data for the nine year period, 1979-1987.

For the total United States the average length of stay fell 13% during the nine year period, from 6.7 days in 1979 to 5.8 days in 1987. While the largest decrease occurred between 1983 and 1984, average stay appears to have levelled off since 1986. Regional variations have remained consistent; hospital stays are highest in the Northeast region and lowest in the West (1.8 day difference).

In the following table the length of stay for normal delivery (*ICD-9-CM* Code 650, List A group 270) is displayed for the five years between 1983 and 1987. This example illustrates the overall decline in length of stay, as well as the regional variations described above.

AIDS SUPPLEMENT

The national epidemic of Acquired Immunodeficiency Syndrome (AIDS) has had a major impact on every aspect of the healthcare system. While inpatient hospital stays represent only one of the resources used by AIDS patients, reliable hospital data can be a valuable tool for describing the health crisis. The annual collection of patient data from short-term nonfederal hospitals allows CPHA to present clinical and demographic data on AIDS diagnoses.

In October 1986, new diagnosis classification codes specific to Human Immunodeficiency Virus infection (HIV)[1] were created for *ICD-9-CM* to monitor the diagnoses and manifestations of the disease:

ICD-9-CM AIDS Related Diagnoses Codes (October, 1986)

044.9	HTLV-III/LAV INFECTION, NOT OTHERWISE SPECIFIED (WITH OR WITHOUT OTHER CONDITIONS NOT CLASSIFIABLE TO 042, 043, 044)
795.8	POSITIVE SEROLOGICAL OR VIRAL CULTURE FINDINGS FOR HUMAN T-CELL LYMPHOTROPIC VIRUS-III/LYMPHADENOPATHY ASSOCIATED VIRUS (HTLV-III/LAV)

The protocols[2] established by the Centers for Disease Control (CDC) instruct users to give priority to conditions classified by codes in categories 042 over those classified by codes in categories 043 and 044. Conditions classified by codes in category 043 are given priority over 044. Codes in categories 042, 043, and 044 are considered mutually exclusive, and are never to be listed together on the same record.

---

[1] Originally published as Human T-cell Lymphotropic Virus-III/Lymphadenopathy-Associated Virus (HTLV-III/LAV) infection, the terminology was revised effective January 1988 to Human Immunodeficiency Virus (HIV), as authorized by the Centers for Disease Control, Atlanta, Georgia and the National Center for Health Statistics.

[2] *HTLV-III LAV Infection Codes, Official Authorized Addendum, Effective October 1, 1986:* WHO Collaborating Center for Classification of Diseases for North America at the National Center for Health Statistics, with the Health Care Financing Administration.

The 1986 classification of HIV infection codes was intended as an interim system, to be reviewed after a period of use. In August 1987, a revision of the CDC Case Definition[3] attempted to provide clarification with examples of laboratory evidence for or against HIV infection, definitive diagnostic methods, and guidelines for presumptive diagnosis of diseases indicative of AIDS. (Since the reporting of the new definition was targeted for September 1 1987, its use would have little bearing on the 1987 Length of Stay data.)

Within the standard CPHA Length of Stay tables, AIDS diagnoses codes in *ICD-9-CM* categories 042, 043 and 044 fall into List A Group 12 along with a number of other viral diseases. *ICD-9-CM* Code 795.8, Positive HIV Findings, is found in List A Group 340, an aggregate group containing a large number of codes denoting signs, symptoms and ill-defined conditions. Since data pertaining to the AIDS codes are presently grouped with several disparate codes in each of the standard Length of Stay tables, the prevalence of AIDS is masked. This Supplement, therefore, examines each category of AIDS codes individually to provide additional information on AIDS as recorded in the 1987 Length of Stay database.

1987 AIDS DATABASE:

As in the 1987 Length of Stay tables, discharge records representing 21.5% of short-term general hospitals in the United States comprise the database. Unlike the standard Length of Stay tables, in which patient data are assigned an *ICD-9-CM* List A group on the basis of the principal diagnosis, records are included in the AIDS Supplement if they have any AIDS code as either a principal or a secondary diagnosis. In addition, discharge records with an AIDS diagnosis are not excluded, as in the standard Length of Stay tables, when there is a death or transfer to a short-term hospital. While these adjustments augment the base of AIDS records, the resulting data should not be considered in the same manner as the traditional length of stay tables. The data presented in this section are intended to enhance knowledge and are not recommended for purposes of utilization review.

From over 6 million 1987 Length of Stay records, 11,477 (.2%) have an AIDS code as either a principal or secondary diagnosis, that is, one in every 500 hospital discharge records. In the majority of the records (73%), the AIDS code is listed as a secondary rather than as a principal diagnosis. There are 228 records where an AIDS code is both a principal and a secondary and 187 with multiple secondary AIDS codes.

Some precautions are suggested when reviewing the AIDS database:

1. The Length of Stay series is not based on a representative sample, but rather on a total count of discharge records from voluntary participating hospitals. (Refer to page viii for a description of these hospitals.)
2. Hospital records are based on occurrences of discharges, and may include the same patient more than once. With AIDS patients, there may be a relatively high number of readmissions within a year, possibly with a change in the assignment of the particular AIDS code as determined by the associated disease manifestations.

Given the cautions above, the AIDS Supplement is presented by CPHA as a research study and is not intended for comparing lengths of stay. The intent is to increase knowledge about one aspect of the AIDS health crisis, as well as to raise some issues about the coding of AIDS on medical records.

PROFILE OF AIDS RECORDS:

Table 1 presents a summary profile of the AIDS records from the 1987 Length of Stay database. (See page xviii.)

Regional Representation: The number of discharge records with an AIDS diagnosis is proportionally greater in the Northeast region of the United States (4 out of every 1000 hospital discharge records) and in the Western region (2 out of every 1000 discharge records) than in the North Central and Southern regions (1 out of 1000).

Sex/Age: Eighty-six percent of the AIDS discharge records represent male patients with almost half (45%) falling between the ages of 30 and 39.

---

[3] Revision of the CDC Surveillance Case Definition for Acquired Immunodeficiency Syndrome. *Morbidity and Mortality Weekly Report* (Vol. 36, No. 15) August 1987.

Disposition: Eighty-four percent of the AIDS discharge records represent live discharges. An overwhelming majority (88%) of these are discharged to home or self-care.

Payment: The sources of payment are private (self-pay, insurance or workers' compensation) for 51% of the records, and public for 36%. Medicaid constitutes 28% of all payment sources, representing over three-quarters of the public sources.

LENGTH OF STAY:

The average length of stay for the total AIDS base is 14.9 days, with the median (50th percentile) at 9 days. Other percentile distributions are as follows:

5%	1 day	90%	32 days
10%	2 days	95%	45 days
75%	19 days	99%	83 days

Table 2 shows the average length of stay for 3,140 records classified with any AIDS code (in categories 042, 043, 044, or code 795.8) as a principal diagnosis. (See page xix.)

Table 3 shows the average length of stay for 8,337 records classified with any AIDS code (in categories 042, 043, 044, or code 795.8) as a secondary diagnosis. (See page xx.)

For both tables 2 and 3 there appears to be a correlation between the length of stay and the particular AIDS code listed; the average overall length of stay is greater for codes in category 042 than for categories 043, 044, or for code 795.8.

Length of Stay by Operation:

The profile of AIDS records indicates that in more than one half of the hospital stays an operative procedure (*ICD-9-CM* codes 01.0-86.99) is performed. The majority of the reported procedures, e.g., bronchoscopies or CAT scans, are diagnostic rather than therapeutic procedures, and are not considered to affect length of stay.

DIAGNOSES FREQUENTLY ASSOCIATED WITH AIDS:

The following table shows those disease conditions which are most frequently listed with an AIDS code on discharge records, and displays the length of stay for that disease with each AIDS code, as well as the length of stay for the disease when it occurs without AIDS. For this table, each AIDS record is counted once, and may appear as a principal or secondary diagnosis code. In records where more than one AIDS code is listed, codes in category 042 are selected over those in categories 043 or 044, those in categories 043 over those in categories 044 or 795.8, and codes in category 044 over code 795.8.

The associated diseases are counted for each occurrence; one AIDS record may contain a number of other diagnoses codes. Multiple occurrences will also influence length of stay as one patient with a single hospital stay can appear more than once.

The most striking observation is that the length of stay increases significantly for any disease when reported in association with an AIDS diagnosis. For example, patients with anemia (*ICD-9-CM* codes 280.0-285.9) have an average hospital stay of 10.2 days when no AIDS diagnosis is present, but 17.3 days when accompanied by an AIDS diagnosis.

ISSUES:

The data collection for this AIDS Supplement indicates that there is considerable variation in the manner in which AIDS is reported. With AIDS patients presenting many disease manifestations, confusion may exist over the selection of the appropriate AIDS code:

1. Despite the fact that the October 1986 Addendum to the *ICD-9-CM* classification states that codes in categories 042, 043 and 044 are mutually exclusive, there is evidence of multiple coding of AIDS diagnoses.
2. The Addendum also instructs that certain disease manifestations are expected with specific AIDS codes; for example, Kaposi's sarcoma (173.0-173.9) should be linked only with one AIDS code (042.2). However, in this base, codes 173.0-173.9 are also found on discharge records in association with codes in categories 043, 044, and code 795.8.
3. There is some confusion with the coding of pneumocystosis (136.3). While pneumocystosis is found as either a principal or a secondary diagnosis on 3,628 of the Length of Stay records, 20% do not record any AIDS in association. On one hand this may indicate a reluctance to report AIDS. Or, on the other hand, this may be evidence of miscoding, since code 136.3 is sometimes reported in error for a benign form of pneumonia not intended as Pneumocystis carinii pneumonia.

SUMMARY:

The examination of 1987 discharge records from a collection of short-term general hospitals provides a base for analysis of records listing an AIDS code as either a principal or a secondary diagnosis. The data show a significant increase in hospital stay when a disease is recorded in association with an AIDS code. There is, however, evidence of some confusion over the coding of AIDS on hospital records. This study suggests the need for further exploration of the actual practice of AIDS coding and the formulation of recommendations for revision or clarification of the classification system.

Index

Part I: Diagnosis Index
Part II: Operation Index

If a diagnosis or operation does not appear in the Index, its corresponding *ICD-9-CM* code can be found in the *International Classification of Diseases, 9th Revision, Clinical Modification,* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1986, *Volume 2 Diseases: Alphabetic Index or Volume 3 Procedures: Tabular List and Alphabetic Index*. New *ICD-9-CM* codes added in 1987 are reflected in this index.

PREFACE

This book is one volume in a set of seven books presenting statistics on hospital stay during 1987 in the United States. The complete set is the latest in a series of publications on length of stay in hospitals that participate in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities. Data from several organizations contributing to CPHA from other sources are included in the 1987 series.

These statistics, also available on magnetic tape, provide a valuable perspective for utilization and quality assurance professionals, physicians, consultants, hospital administrators, third party payors and researchers interested in cost containment and quality care.

CPHA wishes to extend appreciation to the hospitals and state organizations that supported this publication by making their data available.

The Project Staff is indebted to many individuals who made this publication possible. Special thanks to Research Services staff: Carol Prevost, Research Associate, for her Length of Stay expertise, technical advice and patience; Roger Wroblewski, Statistician, for data analysis; Dorothy Kempter and Nancy Cauthen for reviewing the AIDS text; Rhonda Gregory and Kathy Lundquist for clerical and technical support.

Appreciation is extended to other individuals at CPHA: Robert Seeman, Senior Nosologist, for his explanation of coding issues and valuable assistance in producing the AIDS Supplement; John Hallfrisch, MD, Consultant, for his interpretation of clinical data; Robert Travis, Librarian, for meticulously checking the text through its many stages; and the staff of Operations, Client Services, and Word Processing.

INTRODUCTION

The Commission on Professional and Hospital Activities (CPHA) is an organization dedicated to the improvement of hospital and medical care through research, education, publishing, and systems development. Established in 1955 under grants from the W.K. Kellogg Foundation, CPHA is a nonprofit, private organization, sponsored by the American College of Physicians, the American College of Surgeons, the American Hospital Association, and the Southwestern Michigan Hospital Council.

CPHA Publications, a unit of the Research Department, is responsible for the development of data reference tools setting performance guidelines and comparative standards for the health care industry. CPHA Publications disseminates important research findings to support and enhance the day to day activity of health care professionals in a variety of settings.

DESCRIPTION OF THE DATABASE

Source of the Data

Data in the Length of Stay books were compiled from individual patient discharge records submitted to CPHA by hospitals participating in the Professional Activity Study (PAS). In addition, some books contain discharge data from hospitals participating in information systems other than PAS.

The following steps describe the PAS method of storing and retrieving medical data:

1. In each participating hospital, personnel transfer data from the medical record of each discharged patient into the PAS System via PAS+ microcomputer, magnetic tape, or PAS Case Abstract.
2. The disk, tape, or abstract, is mailed to the center of PAS operations in Ann Arbor, Michigan, where it is entered into the computer system.
3. Data undergo a comprehensive editing process and errors are corrected by CPHA and contributing hospitals.
4. The computer system continually adds data to a permanent file. Participating hospitals are provided access to these data through interactive systems, in-house computers, and reports. The stored data are also available to researchers on a contractual basis.
5. Data are standardized to create an aggregated patient record base.

Annually, CPHA Publications uses these data to create the Length of Stay (LOS) series and other reference tools.

Data Quality

Data quality is one of the primary concerns of CPHA. Although the hospital has basic responsibility for the quality of PAS data, CPHA shares that responsibility in its function as an extension of the hospital's medical information network.

CPHA exerts considerable effort to prevent and correct errors in data submitted. Hospital medical records personnel are trained by CPHA in coding and abstracting methods. CPHA monitors submitted data, and meticulously checks and edits the data for errors. Over 600 computer checks are performed during the processing of each record to ensure the reasonableness of the data. Examples of discrepancies detected by the audit are: hospital day of operative episode exceeding total stay, cesarean section with a normal delivery diagnosis, sex-specific diagnosis or operation with the wrong sex recorded, incalculable age or stay, unrecorded or invalid diagnosis. When illogical, invalid, or missing data are detected, about 40 percent of the errors are corrected by computer. The remainder are referred back to hospital staff through computer-generated error messages.

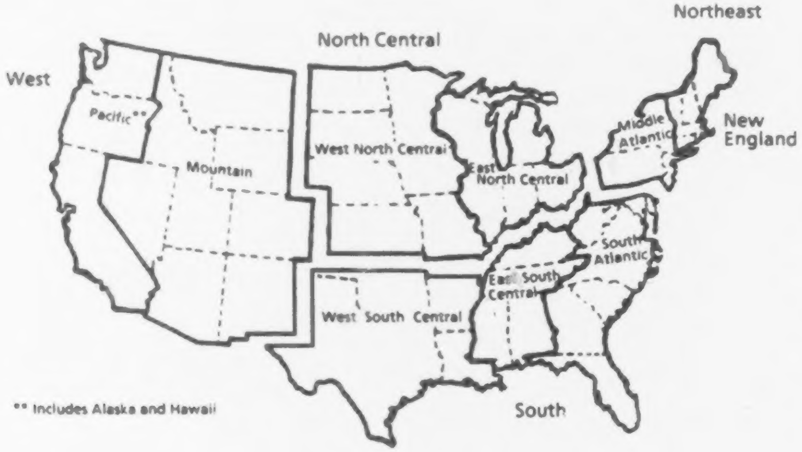
In addition to initial data editing, the computer system that produces the length of stay tables does numerous edits to eliminate uncorrected or unusual data. The following events cause a record to be excluded as not representing a typical short-term patient:

1. death
2. stillborn
3. admission from other short-term hospital
4. discharge to other short-term hospital
5. discharge against medical advice

Geographic Coverage

Data chosen for inclusion in the Length of Stay series are from general, nonfederal, short-term hospitals in the United States. Short-term hospitals are defined as those in which the median stay is shorter than 30 days. General hospitals provide patient services for a variety of medical conditions. Data from long-term specialty institutions, e.g., long-term psychiatric or rehabilitation facilities, are excluded.

The regional volumes of the Length of Stay series are defined by four census regions as described in the map below.



Most data used in the Length of Stay books are from hospitals participating in PAS through CPHA. In addition, the following organizations have sent data to CPHA: Colorado Hospital Association, Hospital Association of New York State, Maine Hospital Association, The National Association of Children's Hospitals and Related Institutions, Inc. (NACHRI), New Hampshire Hospital Association, Oregon Hospital Association, Rhode Island Hospital Association, Southern Kaiser Foundation Hospitals, Vermont Hospital Association and the Wyoming Hospital Association. Several individual hospitals throughout the United States have also sent data to CPHA for special studies. These data enhance CPHA as a national health information center.

Hospitals participating in PAS from United States Territories and Puerto Rico are excluded from the series. Data from psychiatric hospitals are excluded because these facilities are not general hospitals. Data from psychiatric units within general hospitals are included. Pediatric hospitals are also included.

ORGANIZATION OF LENGTH OF STAY TABLES

The length of stay tables are organized according to CPHA's diagnosis and procedure classification system. The Diagnosis classification system is called *ICD-9-CM List A: Hospital Diagnosis Groups*[1]. Within each diagnosis group, patients are stratified by single or multiple diagnoses, operated or nonoperated status, and age. For diagnosis groups 393-395, which pertain exclusively to newborn, age is replaced by birth weight in grams. The Operation classification system is called *ICD-9-CM List B: Hospital Procedure Groups*. Within each procedure group, patients are stratified by single or multiple diagnoses and age.

Diagnosis and procedure information for all patient data included in this book is coded using *ICD-9-CM*. New *ICD-9-CM* codes, introduced in October 1987, are reflected in the index at the back of the book.

Patient Data Assignment

Patient data are assigned an *ICD-9-CM List A* group on the basis of the principal diagnosis. This is the diagnosis that, after study, explains why the patient was admitted to the hospital. Patient data are assigned *ICD-9-CM List B* groups on the basis of the principal procedure. The principal procedure is an item in the Uniform Hospital Discharge Data Set (UHDDS)[2] and generally is that therapeutic procedure most related to the principal diagnosis.

Definition of Multiple Diagnoses Patients

Patients are classified in the multiple diagnoses category if they had at least one valid secondary diagnosis in addition to the principal one. The following codes are not considered valid secondary diagnoses for purposes of this classification:

1. Manifestation codes (conditions that evolved from underlying diseases [etiology] and are in italics in *ICD-9-CM* Volume 1)[3]
2. Codes V27.0-V27.9 (outcome of delivery)
3. E codes (external causes of injury and poisoning)

Definition of Operated Patients

In the diagnosis tables, operated patients are patients who had at least one UHDDS Class 1 procedure. The Class 1 procedure may or may not relate to the principal diagnosis (Dx). Patients with only Class 2-4 procedures are considered nonoperated.

In the procedure tables, operated patients are those whose principal procedure fell into an *ICD-9-CM List B* group where at least one UHDDS Class 1 procedure was present. These tables contain procedures which are either therapeutic to the principal Dx or the only procedure.

While most List B groups contain only Class 1 procedures, the following groups contain Class 1 procedures, and at least one procedure that is Class 2-4: 548, 557, 575, 576, 581, 587, 609, 615, 619, 626, 630, 636, 646, 654, 666, 679, 682, 686, 690, 696, 706, 758, 760, 764. These miscellaneous groups are included for informational purposes only.

List B tables which contain no significant Class 1 procedures are identified with a disclaimer explaining why these tables cannot be used for purposes of examining length of stay. Several tables which, as of October 1987, contain a single low volume Class 1 procedure continue to be identified with a disclaimer.

EXPLANATION OF STATISTICS

The List A diagnosis group titles and List B procedure group titles heading the tables are followed in parentheses by the *ICD-9-CM* diagnosis or procedure codes included in that List A or List B group.

Data are categorized by total patients (column 2), their average length of stay (column 3), the variance (column 4), and distribution percentiles (column 5 through 11). Patients are stratified by single or multiple diagnoses (Dx), operation status, and age. In addition, two subtotals and a grand total are included.

Total Number of Patients

This number represents the total number of patients in the stratified group. Patients with stays over 99 days (99+) are not included.

Average Length of Stay

The length of stay is calculated from the admission and discharge dates by counting the day of admission as the first day. The average is figured by adding the length of stay for each patient and then dividing by the total number of patients. Patients discharged on the day of admission are counted as staying one day in the calculation of average length of stay. Patients with stays over 99 days (99+) are excluded from this calculation.

Variance

The variance is a measure of the spread of the data around the average. For these tables, the smallest variance is zero, indicating all lengths of stay are equal. The maximum value for the variance is 2500.

When using tables in which there is a large variance, and the patient group size is relatively small, the average stay may appear high. This sometimes occurs when one or two patients with long hospitalizations fall into the group.

Distribution Percentiles

A length of stay percentile for a stratified group of patients is determined by arranging the individual patient stays from low to high. Counting up from the lowest stay to the point where half of the patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total patients gives the 10th percentile, and so on.

The 5th, 10th, 50th, 75th, 90th, 95th, and 99th percentiles of stay are displayed in days. If, for example, the 10th percentile for a group of patients is four, it means that 10 percent of the patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+.

Patients who were hospitalized 99+ days or longer are not included in the total patients, average stay, and variance categories. The percentiles, however, do include these patients.

Subtotal and Grand Total

The subtotal represents the total patients in each of the single or multiple Dx, operated or nonoperated categories. The Grand Total represents the total number of patients in the specified diagnosis or procedure category.

APPLICATION OF LENGTH OF STAY TABLES

The Length of Stay series can be used as a valuable reference source in a variety of healthcare settings. Use of stay data allows healthcare professionals to compare regional and national norms to their own institution or client. The LOS series assists in projecting extended stay reviews, while recommending the most effective use of patient care services. Norms from other editions of the LOS series create the opportunity to establish baselines as far back as 1963 to forecast and plan for future service demands.

The following steps are intended to provide a guide in situations where a healthcare professional wishes to determine a reasonable length of stay:

Step 1: Consult the index at the back of the appropriate Length of Stay book for the particular diagnosis or operation to be reviewed.

Step 2: Find the corresponding table in the Length of Stay book. The group number precedes the title of each table.

Step 3: Depending on the purpose of the review, find the appropriate portion of the table:

Single or Multiple Diagnoses

Not Operated or Operated (for Diagnosis groups only)

Patient's Age on Day of Admission

Step 4: Find the 50th percentile of stay for similar patients at the point where the 50th percentile column (7) of the table intersects the horizontal line containing the pertinent patient variables.

Step 5: Consult the total patient sample (Grand Total) and variance to consider the homogeneity of the data, i.e., to what extent length of stay averages are clustered or spread out within a particular patient group.

These general steps are followed, in more specific application, by healthcare professionals in many diverse settings. LOS tables can be used to identify candidates for utilization review, to furnish check points in patient care, to project extended stay reviews and to improve hospital care standards. Concern for quality care and cost containment make the Length of Stay tables an essential tool in the healthcare industry.

LENGTH OF STAY TRENDS

The Length of Stay series sets the industry standard for normative patient stay data from short-term, nonfederal hospitals. First created with 1963-1964 PAS data, the series currently incorporates PAS as well as data from other sources, e.g., hospital associations. The 1987 Length of Stay series is based on over six million patient records, representing 21.5 percent of the short-term, nonfederal hospitals in the United States.

CPHA's annual publication of a reliable, extensive database allows for analysis of length of stay trends. The following table illustrates hospital stay data for the nine year period, 1979-1987.

Source: 1979-1987 *Length of Stay by Diagnosis*, U.S. and Regions

For the total United States the average length of stay fell 13% during the nine year period, from 6.7 days in 1979 to 5.8 days in 1987. While the largest decrease occurred between 1983 and 1984, average stay appears to have levelled off since 1986. Regional variations have remained consistent; hospital stays are highest in the Northeast region and lowest in the West (1.8 day difference).

In the following table the length of stay for normal delivery (*ICD-9-CM* Code 650, List A group 270) is displayed for the five years between 1983 and 1987. This example illustrates the overall decline in length of stay, as well as the regional variations described above.

AIDS SUPPLEMENT

The national epidemic of Acquired Immunodeficiency Syndrome (AIDS) has had a major impact on every aspect of the healthcare system. While inpatient hospital stays represent only one of the resources used by AIDS patients, reliable hospital data can be a valuable tool for describing the health crisis. The annual collection of patient data from short-term nonfederal hospitals allows CPHA to present clinical and demographic data on AIDS diagnoses.

In October 1986, new diagnosis classification codes specific to Human Immunodeficiency Virus infection (HIV)[1] were created for *ICD-9-CM* to monitor the diagnoses and manifestations of the disease:

ICD-9-CM AIDS Related Diagnoses Codes (October, 1986)

CODE	TITLE
042	HTLV-III/LAV INFECTION WITH SPECIFIED CONDITIONS
042.0	HTLV-III/LAV INFECTION WITH SPECIFIED INFECTIONS
042.1	HTLV-III/LAV INFECTION CAUSING OTHER SPECIFIED INFECTIONS
042.2	HTLV-III/LAV INFECTION WITH SPECIFIED MALIGNANT NEOPLASMS
042.9	ACQUIRED IMMUNODEFICIENCY SYNDROME WITH OR WITHOUT OTHER CONDITIONS
043	HTLV-III/LAV INFECTION CAUSING OTHER SPECIFIED CONDITIONS
043.0	HTLV-III/LAV INFECTION CAUSING LYMPHADENOPATHY
043.1	HTLV-III/LAV INFECTION CAUSING SPECIFIED DISEASES OF THE CENTRAL NERVOUS SYSTEM
043.2	HTLV-III/LAV INFECTION CAUSING OTHER DISORDERS INVOLVING THE IMMUNE MECHANISM
043.3	HTLV-III/LAV INFECTION CAUSING OTHER SPECIFIED CONDITIONS
043.9	ACQUIRED IMMUNODEFICIENCY SYNDROME-RELATED COMPLEX WITH OR WITHOUT OTHER CONDITIONS
044	OTHER HTLV-III/LAV INFECTION
044.0	HTLV-III/LAV INFECTION CAUSING SPECIFIED ACUTE INFECTIONS
044.9	HTLV-III/LAV INFECTION, NOT OTHERWISE SPECIFIED (WITH OR WITHOUT OTHER CONDITIONS NOT CLASSIFIABLE TO 042, 043, 044)
795.8	POSITIVE SEROLOGICAL OR VIRAL CULTURE FINDINGS FOR HUMAN T-CELL LYMPHOTROPIC VIRUS-III/LYMPHADENOPATHY ASSOCIATED VIRUS (HTLV-III/LAV)

The protocols[2] established by the Centers for Disease Control (CDC) instruct users to give priority to conditions classified by codes in categories 042 over those classified by codes in categories 043 and 044. Conditions classified by codes in category 043 are given priority over 044. Codes in categories 042, 043, and 044 are considered mutually exclusive, and are never to be listed together on the same record.

---

[1] Originally published as Human T-cell Lymphotropic Virus-III/Lymphadenopathy-Associated Virus (HTLV-III/LAV) infection, the terminology was revised effective January 1988 to Human Immunodeficiency Virus (HIV), as authorized by the Centers for Disease Control, Atlanta, Georgia and the National Center for Health Statistics.

[2] *HTLV-III LAV Infection Codes, Official Authorized Addendum, Effective October 1, 1986:* WHO Collaborating Center for Classification of Diseases for North America at the National Center for Health Statistics, with the Health Care Financing Administration.

The 1986 classification of HIV infection codes was intended as an interim system, to be reviewed after a period of use. In August 1987, a revision of the CDC Case Definition[3] attempted to provide clarification with examples of laboratory evidence for or against HIV infection, definitive diagnostic methods, and guidelines for presumptive diagnosis of diseases indicative of AIDS. (Since the reporting of the new definition was targeted for September 1 1987, its use would have little bearing on the 1987 Length of Stay data.)

Within the standard CPHA Length of Stay tables, AIDS diagnoses codes in *ICD-9-CM* categories 042, 043 and 044 fall into List A Group 12 along with a number of other viral diseases. *ICD-9-CM* Code 795.8, Positive HIV Findings, is found in List A Group 340, an aggregate group containing a large number of codes denoting signs, symptoms and ill-defined conditions. Since data pertaining to the AIDS codes are presently grouped with several disparate codes in each of the standard Length of Stay tables, the prevalence of AIDS is masked. This Supplement, therefore, examines each category of AIDS codes individually to provide additional information on AIDS as recorded in the 1987 Length of Stay database.

1987 AIDS DATABASE:

As in the 1987 Length of Stay tables, discharge records representing 21.5% of short-term general hospitals in the United States comprise the database. Unlike the standard Length of Stay tables, in which patient data are assigned an *ICD-9-CM* List A group on the basis of the principal diagnosis, records are included in the AIDS Supplement if they have any AIDS code as either a principal or a secondary diagnosis. In addition, discharge records with an AIDS diagnosis are not excluded, as in the standard Length of Stay tables, when there is a death or transfer to a short-term hospital. While these adjustments augment the base of AIDS records, the resulting data should not be considered in the same manner as the traditional length of stay tables. The data presented in this section are intended to enhance knowledge and are not recommended for purposes of utilization review.

From over 6 million 1987 Length of Stay records, 11,477 (.2%) have an AIDS code as either a principal or secondary diagnosis, that is, one in every 500 hospital discharge records. In the majority of the records (73%), the AIDS code is listed as a secondary rather than as a principal diagnosis. There are 228 records where an AIDS code is both a principal and a secondary and 187 with multiple secondary AIDS codes.

Some precautions are suggested when reviewing the AIDS database:

1. The Length of Stay series is not based on a representative sample, but rather on a total count of discharge records from voluntary participating hospitals. (Refer to page viii for a description of these hospitals.)
2. Hospital records are based on occurrences of discharges, and may include the same patient more than once. With AIDS patients, there may be a relatively high number of readmissions within a year, possibly with a change in the assignment of the particular AIDS code as determined by the associated disease manifestations.

Given the cautions above, the AIDS Supplement is presented by CPHA as a research study and is not intended for comparing lengths of stay. The intent is to increase knowledge about one aspect of the AIDS health crisis, as well as to raise some issues about the coding of AIDS on medical records.

PROFILE OF AIDS RECORDS:

Table 1 presents a summary profile of the AIDS records from the 1987 Length of Stay database. (See page xviii.)

Regional Representation: The number of discharge records with an AIDS diagnosis is proportionally greater in the Northeast region of the United States (4 out of every 1000 hospital discharge records) and in the Western region (2 out of every 1000 discharge records) than in the North Central and Southern regions (1 out of 1000).

Sex/Age: Eighty-six percent of the AIDS discharge records represent male patients with almost half (45%) falling between the ages of 30 and 39.

---

[3] Revision of the CDC Surveillance Case Definition for Acquired Immunodeficiency Syndrome. *Morbidity and Mortality Weekly Report* (Vol. 36, No. 15) August 1987.

Disposition: Eighty-four percent of the AIDS discharge records represent live discharges. An overwhelming majority (88%) of these are discharged to home or self-care.

Payment: The sources of payment are private (self-pay, insurance or workers' compensation) for 51% of the records, and public for 36%. Medicaid constitutes 28% of all payment sources, representing over three-quarters of the public sources.

LENGTH OF STAY:

The average length of stay for the total AIDS base is 14.9 days, with the median (50th percentile) at 9 days. Other percentile distributions are as follows:

5%	1 day	90%	32 days
10%	2 days	95%	45 days
75%	19 days	99%	83 days

Table 2 shows the average length of stay for 3,140 records classified with any AIDS code (in categories 042, 043, 044, or code 795.8) as a principal diagnosis. (See page xix.)

Table 3 shows the average length of stay for 8,337 records classified with any AIDS code (in categories 042, 043, 044, or code 795.8) as a secondary diagnosis. (See page xx.)

For both tables 2 and 3 there appears to be a correlation between the length of stay and the particular AIDS code listed; the average overall length of stay is greater for codes in category 042 than for categories 043, 044, or for code 795.8.

Length of Stay by Operation:

The profile of AIDS records indicates that in more than one half of the hospital stays an operative procedure (*ICD-9-CM* codes 01.0-86.99) is performed. The majority of the reported procedures, e.g., bronchoscopies or CAT scans, are diagnostic rather than therapeutic procedures, and are not considered to affect length of stay.

DIAGNOSES FREQUENTLY ASSOCIATED WITH AIDS:

The following table shows those disease conditions which are most frequently listed with an AIDS code on discharge records, and displays the length of stay for that disease with each AIDS code, as well as the length of stay for the disease when it occurs without AIDS. For this table, each AIDS record is counted once, and may appear as a principal or secondary diagnosis code. In records where more than one AIDS code is listed, codes in category 042 are selected over those in categories 043 or 044, those in categories 043 over those in categories 044 or 795.8, and codes in category 044 over code 795.8.

The associated diseases are counted for each occurrence; one AIDS record may contain a number of other diagnoses codes. Multiple occurrences will also influence length of stay as one patient with a single hospital stay can appear more than once.

The most striking observation is that the length of stay increases significantly for any disease when reported in association with an AIDS diagnosis. For example, patients with anemia (*ICD-9-CM* codes 280.0-285.9) have an average hospital stay of 10.2 days when no AIDS diagnosis is present, but 17.3 days when accompanied by an AIDS diagnosis.

Frequently Associated Dx Codes with AIDS as Principal or Secondary

ISSUES:

The data collection for this AIDS Supplement indicates that there is considerable variation in the manner in which AIDS is reported. With AIDS patients presenting many disease manifestations, confusion may exist over the selection of the appropriate AIDS code:

1. Despite the fact that the October 1986 Addendum to the *ICD-9-CM* classification states that codes in categories 042, 043 and 044 are mutually exclusive, there is evidence of multiple coding of AIDS diagnoses.
2. The Addendum also instructs that certain disease manifestations are expected with specific AIDS codes; for example, Kaposi's sarcoma (173.0-173.9) should be linked only with one AIDS code (042.2). However, in this base, codes 173.0-173.9 are also found on discharge records in association with codes in categories 043, 044, and code 795.8.
3. There is some confusion with the coding of pneumocystosis (136.3). While pneumocystosis is found as either a principal or a secondary diagnosis on 3,628 of the Length of Stay records, 20% do not record any AIDS in association. On one hand this may indicate a reluctance to report AIDS. Or, on the other hand, this may be evidence of miscoding, since code 136.3 is sometimes reported in error for a benign form of pneumonia not intended as Pneumocystis carinii pneumonia.

SUMMARY:

The examination of 1987 discharge records from a collection of short-term general hospitals provides a base for analysis of records listing an AIDS code as either a principal or a secondary diagnosis. The data show a significant increase in hospital stay when a disease is recorded in association with an AIDS code. There is, however, evidence of some confusion over the coding of AIDS on hospital records. This study suggests the need for further exploration of the actual practice of AIDS coding and the formulation of recommendations for revision or clarification of the classification system.

Index

Part I: Diagnosis Index
Part II: Operation Index

If a diagnosis or operation does not appear in the Index, its corresponding *ICD-9-CM* code can be found in the *International Classification of Diseases, 9th Revision, Clinical Modification*, Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1986, *Volume 2 Diseases: Alphabetic Index* or *Volume 3 Procedures: Tabular List and Alphabetic Index*. New *ICD-9-CM* codes added in 1987 are reflected in this index.

DIAGNOSIS INDEX

This diagnosis index lists common diagnoses and gives the number of the *ICD-9-CM List A* Diagnosis Group to which each diagnosis belongs.

Group No.	Title
	Abdominal
211	angina
165	aortic aneurysm
338	pain
258	Abortion, except spontaneous, elective, legal, therapeutic and threatened
255	elective
256	illegal
258	missed
256	self-induced
257	spontaneous
255	therapeutic
259	threatened
	Abscess
210	anal
312	bone
292	digit
188	mouth
188	salivary gland
291	skin and subcutaneous tissue, except digit
188	tongue
81	Acidosis, except diabetic
72	diabetic
12	Acquired immunodeficiency syndrome (AIDS)
	Addiction-*see Dependence*
	Adenocarcinoma-*see Neoplasm, malignant*
245	Adenomyosis
110	Adjustment reaction
207	Adynamic ileus
12	AIDS, including AIDS-related complex or condition
	Alcohol
107	abuse
104	dependence
107	intoxication, except in chronic alcoholism
104	in chronic alcoholism
92	Alcoholic psychosis
104	Alcoholism, chronic
81	Alkalosis
183	Allergic bronchitis
90	Alzheimer's dementia
1	Amebiasis
140	AMI
340	Amnesia
	Amputation, traumatic
372	lower limb
371	upper limb
79	Amyloidosis
210	Anal abscess, fissure, fistula
391	Anaphylactic shock, except due to drugs
386	due to drugs
84	Anemia, except iron deficiency, sickle cell, and of pregnancy
84	aplastic
82	iron deficiency
267	of pregnancy
269	with delivery
83	sickle cell
166	Aneurysm, except aorta
165	aorta
141	Angina pectoris
54	Angioma
301	Ankylosis
	Anomaly, congenital
318	central nervous system
320	circulatory system
323	digestive system, except cleft palate and lip, and pyloric stenosis
319	ear
319	eye
327	generalized
325	genitourinary system, except undescended testis and urethral stenosis
320	heart

	Anomaly, congenital **(continued)**
317	musculoskeletal system, except clubfoot
323	respiratory system
340	Anorexia, except nervosa
111	nervosa
140	Anterior wall infarction
101	Anxiety reaction or neurosis, except depression
102	depression
165	Aortic aneurysm
	Aortic valve disease-*see Valvular disease*
128	Aphakia
84	Aplastic anemia
199	Appendicitis, except acute
197	acute, without peritonitis
198	with peritonitis
199	recurrent
148	Arrhythmia, heart
168	Arterial disease, except cerebrovascular, arteriosclerosis, aneurysm, embolism, thrombosis, and gangrene
	Arteriosclerosis
163	cerebral
143	coronary
164	lower limb
	Arteriosclerotic
151	cardiovascular disease
91	dementia or psychosis
143	heart disease
164	vascular disease
299	Arthritis, except osteo- and rheumatoid
298	osteo-, except spine
303	spine
299	pyogenic
297	rheumatoid, except spine
302	spine
339	Ascites
151	ASCVD
143	ASHD

183	Asthma
183	Asthmatic bronchitis
	Atherosclerosis-*see Arteriosclerosis*
147	Atrial fibrillation and flutter
76	Avitaminosis
145	Bacterial endocarditis
234	Bacteriuria, except in pregnancy
266	in pregnancy
287	with delivery
311	Baker's cyst
235	Benign prostatic hyperplasia (BPH)
234	Bladder disease, except calculus and cystitis
48	Blast cell leukemia
	Bleeding
251	menopausal
251	postmenopausal
250	uterine, dysfunctional
221	Blind loop syndrome
129	Blindness
148	Block, heart
332	Bloody nose
313	Bone disease, except osteomyelitis and osteoarthritis
123	Borderline glaucoma
1	Botulism
67	Bowen's disease
235	BPH
242	Breast disease, except fibrocystic
241	fibrocystic
183	Bronchial asthma
174	Bronchiolitis, acute
181	Bronchitis
174	acute
181	chronic
179	Bronchopneumonia
6	Brucellosis
